Q: Android why I am getting error while grabbing picture from gallery? I'm trying to develop application which will allow user to browse photo from gallery. I'm grabbing image from gallery using following code

```
Intent galleryIntent = new Intent(Intent.ACTION_PICK, android.provider.MediaStore.Images.Media.EXTERNAL_CONTENT_URI); startActivityResult(galleryIntent, REQUEST_IMAGE_GALLERY);
```

On after successfully picking image from gallery it suppose to grab image from SD card. First thing I did is to put permission into manifest file. But then I found out that on most of devices I get error in LogCat. Here is what it says:

```
java.lang.IllegalArgumentException: Expected REQUEST_CODE but received 0
```

What could be the reason for this error and how to fix this problem? A: For API level Q: How to connect using wireshark So, I have Ubuntu 18.04.3 LTS and I need to connect with my smartphone to a Wi-Fi and my computer to my wi-fi. I am trying to scan around for some open networks near me, and hope to be able to connect to them with the help of a program. My first issue is that, Wireshark is not finding any networks near me. I have tried wireshark -i eth0 command, as well as reboot my PC so that it could be a driver problem, yet it was not helped. I have tried turning off/on Wi-Fi, adding it to ifconfig/ifup commands, tried a few other methods I have found on
